To learn about new features for previous releases, visit our support website at <http://help.sap.com>.

Fixed Issues

Performance Enhancements

Description:

A number of issues have been resolved that improve the overall performance of Xcelsius, including:

- Resolved numerous issues that caused Xcelsius to stop responding.
- Improvements in memory management and the ability to generate larger SWF files.
- Improved Excel operation workflow to resolve several issues that caused Xcelsius to stop responding or to lose data bindings when the spreadsheet was in edit mode.
- Resolved issues that resulted in a "Server Busy" error that caused Xcelsius to stop responding.

ADAPT01086165 (Live Office connection removes leading zeros and spaces)

Description:

When a model included a Live Office connection, all data strings were converted to numeric format and leading zeros and spaces were removed.

New Behavior:

When a model includes a Live Office connection, all data strings are converted to numeric format and leading zeros are retained. Leading spaces are still removed.

ADAPT01087308 (Unable to modify worksheets in exported Excel files)

Description:

When an Excel spreadsheet was exported from Xcelsius, the file was locked and users were unable to add/remove/edit/rename worksheets in the Excel file.

New Behavior:

This issue is resolved.

ADAPT01233036 (Using Preview while editing a cell in the spreadsheet loses data bindings)

Description:

If the spreadsheet was in editing mode (the cursor was active in a spreadsheet cell) and the user clicked the **Preview** button, they would encounter a "Server Busy" error. In some cases, when they cancelled the request, the data binding in their model would be removed.

New Behavior:

This issue is resolved. Users are prevented from previewing their model when the spreadsheet is in editing mode.

ADAPT01275877 (Text components remove leading zeros)

Description:

When a numeric value with leading zeros was entered into the Input Text and Input Text Area components, the leading zeros would be deleted from the associated cells in the embedded spreadsheet and from the display.

New Behavior:

This issue is resolved. A new **Treat Input as Text** option is added to the **Behavior** view for Input Text and Input Text Area components. When selected the input is treated as text, which preserves leading zeros but does not allow the input to be used in calculations or formulas. When not selected, the input is treated as a numeric value, which can be used in calculations or formulas, but removes leading zeros from the output.

ADAPT01278884 (Opening model with macros results in errors)

Description:

When users attempted to load a model that contained macros, they encountered a "Server Busy" error. After closing that error message, they received "Problem Accessing Excel" error and Xcelsius would close.

New Behavior:

This issue is resolved.

ADAPT01295018 (Combination charts scale uneven)

Description:

If a Combination chart had a manually-configured scale, when the size of the chart was changed, the scale intervals would be uneven.

New Behavior:

This issue is resolved.

ADAPT01296833 (Data changed after Live Office connection refreshed)

Description:

When a model contained a Live Office connection and data had a "e" at the end of a number (for example, 1e) or leading zeros or spaces, the "e" or leading zero, and leading spaces were removed when the connection was refreshed.

New Behavior:

This issue is resolved.
